FOOTER

1. The First Image Banner => We get it from cache Api data, Key name called "**category\_banner**".And show it on top of the PLP page.

2. The Product Image, We get it from **Data.json.imageUrl.primaryimage[0]** in cache api data and below image we are showing name of the product. Name is get from **Data.json.name**.

3. If product is out of stock then we have to show **NOTIFY ME WHEN BACK IN STOCK** in the place of **ADD TO BAG** button.We are check stock in No-cache api data **Data.simpleproducts[0].stockstatus**.

4. The first product has Buy 2 get 1 label, This label shows when we get URL in product\_label tag in PLP cache API data. If json > product\_label has contain Image Url then we show that image otherwise we are check product\_tag.

5. The fourth one is a poster. It will show when we get side\_image tag in product\_data.  
"side\_image": {

"banner\_side\_label":"/pub/media/catalog/category/test",  
"banner\_side\_url": "fragrances",

"banner\_side\_image\_web":"/pub/media/catalog/category/Resize\_Banners\_185x403px-01\_6.jpg",

"banner\_side\_image\_mobile":"/pub/media/catalog/category/Resize\_Banners\_185x403px-02\_4.jpg"

}  
If we get That type of data then we have to show banner\_side\_image\_mobile/banner\_side\_image\_web only.

```
6. "offers": {
  "sku": "213155504",
  "status": 1,
  "data": {
    "1": "135"
  }
},
```

we get Data > offers inside offer object if status is 1 and offers > data > "1" has value then we have to show that value first and the Data > price we will show price strike through price like that .
